

ST. JOSEPH'S CATHOLIC CHURCH

St. Joseph's Catholic Church is an 800-seat sanctuary addition to an existing church facility in Lincoln, Nebraska.

CFA's services included acoustical recommendations as well as the design and commissioning of a sound reinforcement system for the new sanctuary. Sound absorption and loudspeakers concealed behind fabric panels provide proper acoustics and sound distribution while maintaining the aesthetic concerns of the space.

The sound system includes source loudspeakers at the altar and choir area to provide directional realism from these two locations of the sanctuary. Automatic microphone mixing provides natural reinforcement of speech and music without the requirement for a dedicated sound system operator.

Client: St. Joseph's Catholic Church; Lincoln, NE

Facilities: Sanctuary

Designer: Robert G. Ledo

Completed: 2000
