

JOHN DEERE CREDIT

The John Deere Credit World Headquarters, located in Johnston, Iowa, consists of two multi-story buildings connected by a three-story atrium style lobby.

CFA's services for this project included acoustical consultation; programming and detailed design of audio-visual, videoconferencing, sound reinforcement, sound masking, and RF distribution systems; and final testing and commissioning of the installed systems.

In addition to six floors of open office space, the John Deere Credit facility included an executive boardroom, four training classrooms (two of which combine to form a larger meeting space), an outdoor meeting area, and a videoconferencing room. Pictured above is one of the training classrooms in the process of being set up for the next event.

While each of the spaces feature local in-room control of the audio-visual and related systems, the facility also has a central control room to provide remote monitoring and control when required.
