

SHAWNEE PARK CHRISTIAN CHURCH

Shawnee Park Christian Church is a Disciples of Christ related religious facility in Shawnee, Kansas.

CFA provided acoustical consultation and the design of a sound reinforcement system for a new Sanctuary as part of a church facilities expansion project.

The central loudspeaker cluster contains several full range loudspeaker cabinets with matching low frequency effects loudspeakers. An IED automatic microphone mixer is used for the typical speaking parts in a worship service while a manual microphone mixer and audio playback devices in the Choir area support the active music ministry at the Church.
